-ITSSUE SPECIFICITY: Highly expressed in brain and kidney.
-ITSSUE Autophosphorylated on Ser/Thr. Phosphorylated in cytosol under basal conditions and dephosphorylated when membraneassociated (By similarity).
-ISIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.

MAP KINASE KINASE KINASE SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -i- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

                                                                                                                         -1- CATALYTIC ACTIVITY: RCH(2)NH(2) + H(2)O + acceptor = RCHO + NH(3) + reduced acceptor.
-1- COPACTOR: EACH OF THE SMALL SUBUNITS CONTAINS A COVALENTLY BOUND POQ-LIKE COPACTOR CALLED TRYPTOPHAN TRYPTOPHYLQUINONE (TTQ).
-1- PATHWAY: METHYLAMINE UTILIZATION.
-1- SUBUNIT: TETRAMER OF TWO LIGHT AND TWO HEAVY CHAINS.
-1- SUBCELLULAR LOCATION: PETIPLAGAMIC.
-1- SIMILARITY: HIGH, TO OTHER SPECIES MADH LIGHT CHAIN.
                                  X-SAY CRYSTALLOGRAPHY (2.25 ANGSTROMS).

Structure determination of quinoprotetin methylamine dehydrogenase from Thiobacillus versutus.";
Acta Crystallogr. B 46:806 823(1990).
-!- FUNCTION: METHYLAMINE DEHYDROGENASE CARRIES OUT THE OXIDATION OF METHYLAMINE. ELECTRONS ARE PASSED FROM METHYLAMINE DEHYDROGENASE
TO AMICKANIN.
                                                                                                                                                                                                                                                                                                                                                                                     METHYLAMINE DEHYDROGENASE LIGHT CHAIN
Structure of quinoprotein methylamine dehydrogenase at 2.25-A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2).

"Sequence analyysis of rat TNF-alpha converting enzyme (TACE) CDNA.";

"Sequence analyysis of the EMBL/GenBank/DDBJ databases.

"Sequence TOWN-1998) to the EMBL/GenBank/DDBJ databases.

"In CIEAVES THE MEBRANE-BOUND PRECURSOR OF TNF-ALPHA TO ITS MATURE SOLUBLE FORM. RESPONSIBLE FOR THE PROTEOLYTIC RELEASE OF SEVERAL OTHER CELL-SURFACE PROTEINS, INCLUDING P75 TNF-RECEPTOR, INTERLEBKIN 1 RECEPTOR TYPE II, P55 TNF-RECEPTOR, TRANSFORMING GROWTH FACTOR-ALPHA, L-SELECTIN, AND THE ANYLOID PRECURSOR PROTEIN. ALSO INVOLVED IN THE ACTIVATION OF NOTCH PATHWAY (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Rattus norvegicus (Rat).

"Cloning and expression of a novel mammalian white family
ABC-transporter: WHITE2.";
Submitted (NOV-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: May be involved in macrophage lipid homeostasis.
-!- SUBCELLULAR LOCATION: Integral membrane protein (Probable).
-!- SIMILARITY: BELONGS TO THE ABC TRANSPORTER FAMILY. ABGG (WHITE)

ATTERNATIVE PRODUCTS: AT LEAST 2 ISOFORMS; PC5B/LONG (SHOWN HERE)
AND PC5AS/GHOFT, ARE PRODUCED BY ALTERNATIVE PLCING.

1- TISSUE SPECIFICITY: PC5A IS EXPRESSED IN MOST TISSUES BUT IS MOST ABUNDANT IN THE INTESTINE AND ADRENALS. PC5B IS EXPRESSED IN THE INTESTINE AND LUNG BUT NOT IN THE BRAIN.

1- DEVELOPMENTAL STAGE: WEAKLY EXPRESSED THROUGHOUT THE EMBRYO, EXCEPT IN THE DEVELOPMENT. AT PC5 IS EXPRESSED IN THE LIVER, BY ARREDLY UPGENDENT. AT E6.5, PROMINEW EXPRESSED IN DIFFERENCIATED BECIDUA. AT E7.5, INTENSE EXPRESSION IN EXTRABBRYONIC ENDODERM, AMNION AND NACENT MESODERM. AT 8.5, ABUNDANT EXPRESSION IN SOMITES AND YOLK SAC FOLLOWED BY A CONFINATION TO DEPARATOR COMPATAMENT. BETWEEN E9.5 AND E11.5, ABUNDANT EXPRESSION IN SHIES IS COMPINED TO THE CONDENSING MESENCHYM SURROUNDING THE CAMPILLAGE. AT THIS STAGE, STRONG EXPRESSION IN THE LINES IS CONFINED TO THE CONDENSING MESENCHYM SURROUNDING THE CARFILLAGE. AT THIS STAGE, STRONG EXPRESSION IN THE MUSCLE AT THIS STAGE, STRONG EXPRESSION IN THE MUSCLE OF THE IONGEN AT E16.5, ABUNDANT EXPRESSION IN THE LINES IN VERTEBRAL AND FACIAL ISOFORM A IS MOST ABUNDANT ALL STAGES BUT INJESTINAL INLIE.

ISOFORM A IS MOST ABUNDANT ALL STAGES BUT ISORIAL LEVELS OF THE INTESTINAL LEVELS OF THE DEVELS OF THE STORIAL LEVELS OF

                                                                                                                                                                                                                                                                                                                                                                                                                                     CYTOPLASMIC (POTENTIAL).
SIGNAL-ANCHOR (TYPE-II MEMBRANE PROTEIN).
LUMENAL, CATALYTIC (POTENTIAL).
N-LINKED (GLCNAC. .) (POTENTIAL).
                                                   (POLYSIALIC ACID) EXPRESSION.
PATHWAY: GLYCOSYLATION.
SUBCELLULAR LOCATION: Type II membrane protein. Golgi (Potential).
TISSUE SPECIFICITY: EXPRESSED ONLY IN NEWBORN BRAIN.
DEVELOPMENTAL STAGE: NEWBORN.
SIMILARITY: BELONGS TO THE VERTEBRATE SIALYLTRANSFERASE PAMILY.
FUNCTION: MAY TRANSFER SIALIC ACID THROUGH ALPHA-2,8-LINKAGES TO THE ALPHA-2,3-LINKED AND ALPHA-2,6-LINKED SIALIC ACID OF N-LINKED OLIGOSACCHARIDES OF GLYCOPROTEINS AND MAY BE INVOLVED IN PSA
                                                                                                                                                                                                                                                                                                                                                            Interpro; IPR001675; Glyco_transf_29.
Pfam; PF00777; Glyco_transf_29; 1.
Transferase; Glycosyltransferase; Glycoprotein; Transmembrane;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         403 IGTGCCATAGTGTCAAACTCAGGTCAGATGGTTGGCCAGAAGGTGGGAAA 452

BLOI. Chem. 269:17872-17878(1994).

-i. FUNCTION: MAY TRANSFER SIALIC ACID THROUGH ALPHA-2,8-LINKAGES

TO THE ALPHA-2,3-LINKED AND ALPHA-2,6-LINKED SIALIC ACID OF

TO THE ALPHA-2,3-LINKED ALPHA-2,6-LINKED SIALIC ACID OF

N-LINKED OLIGOSACCHARIDES OF GLYCOPROTEINS AND MAY BE INVOLVED

IN PSA (POLYSIALIC ACID) EXPRESSION.

-i. PATHMAY: GLYCOSYLATION.

-i. SUBCELLULAR LOCATION: Type II membrane protein. Golgi (Potential).

-i. TISSUE SPECIFICITY: HIGHLY EXPRESSED IN FETAL BRAIN, KIDNEY AND

HEART AND TO A MUCH LESSER EXTENT IN ADULT HEART AND THYMUS.

-i. SIMILARITY: BELONGS TO THE VERTEBRATE SIALYLTRANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Angata K., Nakayama J., Fredette B., Chong K., Ranscht B., Fukuda M.; "Human STX polysialyltransferase forms the embryonic form of the neural cell adhesion molecule. Tissue-specific expression, neurite outgrowth, and chromosomal localization in comparison with another polysialyltransferase, PST.";

-1- SUBCELLOLLAR LOCATION: Type II membrane protein. Golgi (Potential).
-1- TISSUE SPECIFICITY: EXPRESSED IN BRAIN AND TESTES.
-1- DEVELOPMENTAL STAGE: EXPRESSED FIRST IN 20 POSTCOITUM FETAL BRAIN
AND DECREASES THERRAFTER DURING DEVELOPMENT.
-1- SIMILARITY: BELONGS TO THE VERTEBRATE STALYLFRANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CYTOPLASMIC (POTENTIAL).
SIGNAL-ANCHOR (TYPE-II MEMBRANE PROTEIN)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Yoshida Y., Kojima N., Kurosawa N., Hamamoto T., Tsuji S.;
"Molecular cloning of Sia alpha 2,3Gal beta 1,4GlcNac alpha
2,8-sialyltransferase from mouse brain.";
J. Biol. Chem. 270:14628-14633(1995).
-!- FUNCITON: MAY TRANSFER SIALIC ACID THROUGH ALPHA-2,8-LINKAGES

SIGNAL-ANCHOR (TYPE-II MEMBRANE PROTEIN)
PATHWAY: GLYCOSYLATION.
SUBCELLULAR LOCATION: TYPE II MEMBRANE PROTEIN. MEMBRANE-BOUND FORM IN TRANS CISTERNAE OF GOLGI, SOLUBLE FORM IN BODY FLUIDS. DEVELOPMENTAL STAGE: EXPRESSED IN EARLY EMBRYONIC STAGES.
PTM: THE SOLUBLE FORM DERIVES FROM THE MEMBRANE FORM BY PROTEOLYTIC PROCESSING.
SIMILARITY: BELONGS TO THE VERTEBRATE SIALYLTRANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                  LUMBALL, CATALYTIC (POTENTIAL).

-1-PATHMAX: GLXCOPROTEIN.
-1-PATHMAX: GLXCOSYLATION.
-1-SUBCELLUAR LOCATION: Type II membrane protein.
-1-TISSUE SPECIFICITY: FOUND IN ALL TISSUES TESTED. HIGH EXPRESSION FOUND IN BRAIN, LIVER, KIDNEY, COLON HEART AND SPLEEN.
-1-DEVELOPMENTAL STAGE: DEVELOPMENTAL REGULATION ONLY OCCURS IN LIVER, HEART, KIDNEY AND SPLEEN.
-1-SIMILARITY: BELONGS TO THE VERTEBRATE SIALYLTRANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                         Eukaryota: Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Euthezia; Rodentia; Sciurognathi; Muridae; Murinae; Mus. C. I- FUNCTION: TRANSFERS SIALIC ACID FROM THE DONOR OF SUBSTRATES.

CATALITA ACID TO GALACTOSE CONTAINING ACCEPTOR SUBSTRATE.

1,4-acetyl-beta-D-galactosyl-1,4-N-acetyl-beta-D-galactosyl-
C. I- A-acetyl-beta-D-galactosyl-1,4-N-acetyl-beta-D-glucosamine.
C. PATHWAY: GLYCOSYLATION.
C. I- SUBCLELULAR LOCATION: TYPE II MEMBRANE PROTEIN. MEMBRANE-BOUND FORM IN TRANS CISTERNAE OF GOLGI, SOLUBLE FORM IN BODY FLUIDS.
C. I- PTM: THE SOLUBLE FORM DERIVES FROM THE MEMBRANE FORM BY PROTEDLYTIC PROCESSING.
C. I- PTM: THE HB-6, CDW75, AND CD76 DIFFERENTIATION ANTIGENS ARE CELL-
SURPACE CARBOHYDRATE DETERMINANTS GENERATED BY THIS ENZYME.
C. SIMPLATIY: BELONGS TO THE VERTEBRATE SIALXLTRANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CYTOPLASMIC.
